Software Developer

Backend Engineer with 3 years of experience building scalable distributed systems in e-commerce and healthcare domains. Experienced in Java, Spring Boot, Python, and cloud-native architectures. Worked at Amazon (MCF – Orders domain) and Fynd (OMS team), contributing to high-scale order processing systems and backend optimizations. Strong focus on system design, performance optimization, and business impact.

SKILLS

Programming Languages: Python, Java, JavaScript

Frameworks: FastAPI, Spring Boot, Django, Node.js

Databases: MySQL, Elasticsearch, PostgreSQL, MongoDB

Messaging & Caching: Kafka, Redis

Cloud & DevOps: AWS (EC2, S3, Lambda, RDS), Docker, Kubernetes, Jenkins

Monitoring & Logging: ELK Stack, Sentry

Concepts: Microservices, REST APIs, Distributed Systems, Multithreading, System Design

Professional Experience

Fynd - SDE

July 2025 – Present

- Designed and implemented Product Bundle functionality in the Order Management System (OMS), enabling grouped product handling with bundle-level pricing, inventory validation, and order lifecycle management.
 - Built end-to-end backend logic for bundle creation, validation, order placement and return journey of order.
 - Developed and supported offline order synchronization for POS systems, enabling orders to be synced later in case of network failures, recovering **8–10%** previously unsynced orders.
 - Customized OMS workflows to support toppings as individual line items for Pizza Hut Malaysia, enabling flexible pricing and order breakdown at item level.
 - Optimized Brunt test execution by refactoring product creation workflows and introducing company-level and application-level product pools, reducing execution time and minimizing system load.
 - Improved system reliability by resolving Brunt-related failures and eliminating redundant product creation processes.
-

Amazon – SDE

March 2025 – June 2025

- Migrated and optimized a seller inventory microservice responsible for identifying non-sellable and non-profitable warehouse inventory.
 - Designed a scheduled batch-processing workflow that consumed CSV files from Amazon S3, applied internal profitability logic, and generated structured output files.
 - Automated seller dashboard ticket generation and email notification workflows to streamline inventory removal actions.
 - Stored processed results in S3 for downstream system consumption and operational tracking.
 - Refactored legacy codebase to improve maintainability, reliability, and operational clarity.
-

Curebay Technologies - SDE

Nov 2022 – Jan 2025

- Led backend development of a WhatsApp-based Chat Commerce platform for medicine ordering, doctor consultations, and lab bookings.
 - Reduced booking time by **50%** and increased patient engagement by **30%**.
 - Migrated in-house Elasticsearch to SaaS Elastic, reducing infrastructure costs by **40%** and improving search latency by **25%**.
 - Enhanced cart and checkout workflows, increasing conversion rates by **20%** and boosting revenue by **30%**.
 - Integrated AI-powered dental report analysis and chatbot-based healthcare suggestions.
 - Resolved partner onboarding duplication issues, reducing errors by **20–30%**.
-

Odisoft Technologies - SDE Intern

Jan 2022 – Oct 2022

- Optimized Elasticsearch queries for 26+ crore records, reducing latency to under 200ms.
 - Developed backend services using Spring Boot and Django for large-scale data retrieval systems.
-

Education

Lakshmi Narain College of Technology and Science, Bhopal

Bachelor of Technology (2018 – 2022)

CGPA: 7.9
